

**WIRELESS COMMUNICATION SYSTEM AND METHOD  
FOR SORTING LOCATION RELATED INFORMATION**

**ABSTRACT**

A system and method for sorting information that has particular significance at a  
5 specific location only to those individuals that are at or near that geo-spatial location. The system  
includes a GPS client wireless component that can be a personal wireless communication device  
(such as Palm Pilot, cellular digital phones, etc.) or personal computer configured for use within a  
global position satellite network.
